MEDIA78 Avery Double Sided Business Cards.pdf

Device Setup

Device	C650
Firmware Level	A01.50 or later
CMF version	Not required
Media Type	Plain
Media Weight	Ultra Heavy 3
Feeding Tray & Orientation	MPT (Multi Purpose Tray) SEF (Short Edge Feeding) Feed 1 by 1
Output Bin	Face-down (Output Tray) Stack 1by 1
Main Limitations <i>Please refer to the MEDIA Statement for all the details</i>	<ul style="list-style-type: none"> • The coating on the surface of the Media can occasionally cause sheets of Media to stick together and be fed through the paper path simultaneously. This can cause mis-feeds of the Media. If this happens please feed the Media one sheet at a time. • Media must be printed from the MP Tray only. • Please ensure that the feeding roller is cleaned regularly due to the paper Powder generated during the printing process • Large curling may occur due to the paper construction of the labels • Only place one sheet at a time in the tray. If you do not do this you may get multiple feeds or mis-feeding of the media and the "mark" of the could be visible. • Due to the electrostatic charges on the media generated during printing phase collect 1 by 1 • Only MANUAL DUPLEX is allowed with these device settings. Please feed media one by one during the back printing • Mis-registration of approximately 200micro meters may occur suddenly. This is generally caused due to media thickness or surface properties. • Pay attention to the PQ around the die-cut perforation. The PQ may deteriorate if you are printing close to and over them
